DETAILED ACTION

1. This action is final.

Claim Rejections - 35 USC § 103

2. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

3. Claims 1-3 are rejected under 35 U.S.C. 103(a) as being unpatentable over Pritchett (2,261,450) in view of Newton's Third Law of Motion.

Pritchett shows the claimed invention where a usefull mass (15) is moving in one direction (to the left in figure 1) and the second useful mass (10) is moving to the right in figure 1; the movements cancel the momentum of each mass; the masses are moved by a spindle and nut drive which has different thread pitches (see figure 2, (26, 31, 27)).

But Pritchett does not show two equal masses which cancel the others forces.

Newton's Third Law of Motion states "When two particles exert forces on each other, these forces are equal in magnitude, opposite in direction, and collinear."

It would have been obvious to one of ordinary skill in the art at the time the invention was made to modify the device of Pritchett such that the two masses were identical in view of the teaching of Newton's Third Law of Motion since it is a

fundamental Law of Motion to have equal masses – moved in opposite directions – exert equal forces. These modifications would cancel any imbalance in the machine tool of Pritchett and thus give the tool a balanced feel in operation.
